

**International Conference of Jurists on Terrorism, Rule of Law & Human Rights to be inaugurated by Hon'ble Prime Minister of India and presided over Hon'ble Chief Justice of India, 13<sup>th</sup>-14<sup>th</sup> December**

This is a Spanish criminologist and engineer working on forensic technologies for expert witnessing criminal evidences for Courts of Law, since 1988. In the last 20 years, judges, public prosecutors, lawyers and engineers have seen many trials with serious technology problems, from small contract litigation, to international terrorism, pointing out some of the key technologies for expert witnessing in criminal procedures. Now, we are considering Indian Evidence Act,1872, *when oral admission as to contents of electronic records are relevant and facts bearing upon opinions of experts.*

Audiovisual technologies can be extremely important in criminalistics (here connected with fingerprint identification)

In Spain, as most of the trials are recorded in digital video, there is a good chance to appeal using audio and transcribed text as well as images in the appeal documents with multimedia arguments. Commercial litigation (left below) as well as most important criminal trials on terrorism (11<sup>th</sup> March 2004 attacks trial in Madrid right below) can be seen now.

We can edit whichever video of recorded trials for appeal courts, and sometimes, local TV station broadcast with very dangerous comments concerning **journalists, public opinion, diplomacy, politics, police and Justice** in very negative ways. Draft 03.12.2008. Comments welcome. Miguel A. Gallardo, Cellular Tel.: +34 619776475 and Madrid phone +34 914743809, E-mail: [miguel619776475@gmail.com](mailto:miguel619776475@gmail.com)

*In order to be useful in Delhi from 7<sup>th</sup> to 19<sup>th</sup> december 2008...*

We are very interested to achieve personal contacts with JOURNALISTS in PAKISTAN and INDIA because of Mumbai terrorist attacks. We believe that Pakistan and India will need police and judiciary information about what really happened in Mumbai. Honestly speaking, we suffered Madrid Atocha train station 11 March 2004 attacks and also the police and judiciary investigation as well as the news and journalist conflicts because the ex-Prime Minister Aznar wanted to accuse ETA (Basque terrorist organisation in the North of Spain) instead Al Qaeda beyond first evidences, as can be read for instance at <http://www.cnn.com/2004/WORLD/europe/03/11/spain.blasts/index.html>

Moreover, in the Spanish trial related with New York 11-S attacks even the journalist of Al Jazeera was sentenced to prison for 7 years as you can read, for instance, at <http://www.achr.nu/art63.htm>  
The Scientific Police Chief was indicted because an expert witnessing report as you can see, even with a video of the criminal trial against 4 policemen, at [http://www.typicallyspanish.com/news/publish/article\\_16905.shtml](http://www.typicallyspanish.com/news/publish/article_16905.shtml)

Historical mistakes never happen just one time. I mean that Pakistan and India journalist will need historical perspective in order to understand what is happening in India and what can happen in the weeks to come, and this criminologist is very interested in learning from Pakistan authorities and press concerning evidences, police investigations and judges preliminary approaches to the facts in Mumbai, so I shall appreciate every contact and references that could let me to be ready to understand something about Pakistan and Mumbai attacks and connections, if any, as well as wrong or false accusations close to victims that are very difficult to check, or to demonstrate, what is true and what is not true. We call it diabolical (pseudo)evidences, *probario diabolica* in Latin or “prueba diabólica”.

Sadam Hussein was clearly in *probario diabolica* in 2003 because there was no way to evidence that he had NO NBQ weapons. Spain was in *probario diabolica* when there was no way to demonstrate that no Spanish official was involved in Maine attack in Havana harbor Cuba, 1898. Please see [http://en.wikipedia.org/wiki/Spanish-American\\_War](http://en.wikipedia.org/wiki/Spanish-American_War)

We very aware of serious expert witnessing needs in 4½ years of police and judiciary history of 11-M attacks in Madrid. And we can give well documented details in Pakistan and India about Spanish police, public prosecutors, judges and journalists mistakes that I hope will be avoided in the weeks and months to come in Pakistan and India.

We want to work advising to avoid them because terrorists's success is the wrong or false accusation between neighbours. That way, very few mad fundamentalists can start a very dangerous conflict, as happened in Madrid and Basque country in 2004. Even less terrorists can start a nuclear war, if let them to do so. They learned. **Do we learn?**

Right now we are preparing a trip to India (arranged since June 2008) and I shall be in Delhi next Sunday 7<sup>th</sup> December in order to participate in the India-Spain Forum that you can see at <http://www.icex.es/indiaspainforum2008>  
My company brochure is also published at <http://www.icex.es/indiaspainforum2008/telecommunications.htm>  
with some details about our priorities on forensic engineering at <http://www.cita.es/India.pdf>  
and for European approaches at [www.cita.es/audiotext](http://www.cita.es/audiotext)

With those references it is easy to foresee that I shall meet authorities and journalists in Delhi from 7<sup>th</sup> to 19<sup>th</sup> so please help me to be useful for new intelligent contacts in Pakistan and India, as soon as possible. Of course, you can forward this message to anyone you consider appropriate, and every list of journalists that could be interested in our approach can be more than useful here and now.

**Some news of Special Interest in India:**

<http://news.in.msn.com/national/article.aspx?cp-documentid=1713924>

According to police sources, Muzzamil had called the terrorists holed up at the Taj Mahal Palace & Tower, Oberoi Trident and Nariman House using a voice over Internet protocol (VOIP) telephone. The US Federal Bureau of Investigation (FBI) has helped investigators track the VOIP telephone to a computer in Lahore.

<http://voanews.com/english/2008-12-02-voa33.cfm>

"This was technologically a pretty sophisticated group," explained Praveen Swami, a Mumbai-based terrorism analyst. "They navigated their way using a state-of-the-art GPS system. Most of their rehearsals to familiarize themselves with Mumbai - because the 10-man team were not familiar with the city - was done on high-resolution satellite maps, so they would have a feel for the city's streets and buildings where they were going to."

But according to the executive director for the Institute for Conflict Management in New Delhi, Ajay Sahni, it was the delay in the response by Indian security forces that might have enabled their siege to last as long as it did.

**He spoke to VOA by phone.**

"The point really is how were they able to protract their operation right up to 60 hours. That is not defined by their capabilities; it is defined by our response. What we did was cordon off the two hotels and the Nariman House. That allowed them free movement within these areas so they went around carrying out various massacres, finding and killing individuals for almost 60 hours since the beginning of the operation," he said.

Sahni asked where is it written that terrorists cannot use the same technology that is available to just about anyone?

**Gun-men were on drugs during Mumbai attacks**

New York Daily News, NY - Dec 3, 2008

"We found injections containing traces of cocaine and LSD left behind by the **terrorists** and later found **drugs** in their blood," one official told London ... [all 1,605 news articles »](#)
