1 attached PDF file (in Spanish)

To Whom it may concern at UIC - International Union of Railways uic.org

We are investigating the accident of ALVIA RENFE train accident in Santiago de Compostela, Spain. Our accidentology expert witnessing approach is very critical with Spanish authorities.

We know that the ALVIA train driver was using a cellular phone and a tablet (APPLE iPad). We have some questions for every country experts and authorities on transport security:

1. Is it allowed in your country to use a tablet while driving a train?
2. Do you now about any other train accident involving cellular and/or tablets used by a driver?
3. Who do you think can be interested in our critical accidentological approach in any country?
4. Can we help more to investigate expert witnessing the facts of the last Spanish train accident in any way?

Please forward this message with the attached file to anybody you consider appropriate. The attached file is published at
